To Whom It May Concern:

I hired Kimberly King as the technical writer for our US Department of Energy SunShot project. This project is instrumenting residential solar inverters for data collection and power grid control in Maui. The Hawaii Natural Energy Institute is the research lead for the project.

Kimberly's unique background in technical writing and integrating renewable energy equipment made her an obvious choice for the team. She defined the templates used for project deliverables and wrote the detailed text. Kimberly drove gathering the needed information for documenting the project and she pointed out several areas where there was not adequate definition. She was very organized in her approach.

I enjoyed working with Kimberly and appreciate her passion. Her efforts moved our project forward and have contributed to our success.

Best regards,
